

What is the idea of the IO?

The pilot concept includes recommendations how the mutual transnational Data Literacy standard - which will be devised during the lifespan of the project - can be implemented at the participating universities regarding the varied local conditions.

It is expected that the participating universities in the cause of the project will agree on a common position regarding DL standards. The challenge is to adopt and implement the standard achieved in accordance with the partly largely differing legal and cultural preconditions.

What are the goals of the IO?

“Compilation of the knowledge gained with special consideration of local cultural characteristics into a concept paper for the introduction of DL standards. This compilation will act as a pilot concept [IO5] and contributes to a digital cultural change.”

How was the IO implemented?

- Still in implementation
- Based on:
 - (1) the work done in IO1 (selection of frameworks chosen in IO1 (Schüller, Ridsdale))
 - (2) existing courses with DL content in the DaLiCo universities
- We compile(d) our experiences and planned further pilots at the universities.

**PILOT CONCEPT FOR
LOCAL
IMPLEMENTATION OF
INTERNATIONAL DATA
LITERACY STANDARD**

IO 5

**RÜDIGER WEIßBACH,
HAW Hamburg**

What are the results of the IO?

- Still in implementation
- Until now, we have different experiences from dedicated DL courses as well as from the implementation of DL content in standard courses
- Implementation constraints are very different, depending in the universities' organization (top down approaches <-> bottom up approaches)

What are ideas for future developments?

We will ...

- ❖ analyze the pilots of the summer term
- ❖ integrate YOUR input in the workshop

Appendix

Ideas of implementation

- Start 01.07.2020
- End 30.06.2022
